

## Introduction

Proval LS is a .NET based application with a MS-SQL database backend. It is licenced on a named user basis. The Windows Active Directory user Profile will be used to create a licence key, stored in the database. This means a licenced Windows user can log onto any PC and use the software without restriction. Whilst there is no control over the number of clients loaded being a per user licence model, once the licenced number of users have logged in for the first time, no other users will be permitted. ProVal LS can be used in a thick client or thin client using Citrix or RDP environment.

## Client Software Requirements

The Client PC is compatible with Windows XP Professional with Service Pack 2, Windows Vista or Windows 7. Microsoft .NET Framework v3.5 is required for all operating systems.

## Client Hardware Requirements

We recommend as a minimum:

- a Pentium 4 class 2GHz or Core 2 Duo at 1.6 GHz CPU
- 1GB RAM
- 128MB 16bit XGA graphics card with
- XGA capable monitor/TFT
- 120MB free hard disk space for installation.

## Server Software Requirements

The server is compatible with Microsoft Windows Server 2003 (any edition) and Microsoft SQL Server 2005 (any edition). Windows Server 2008 and SQL Server 2008 are also supported.

## Server Hardware Requirements

We recommend as a minimum:

- a Pentium 4 class 3GHz or Core 2 Duo at 2.4 GHz CPU
- 2GB RAM;
- 360MB free hard disk space for installation.

Graphics performance of the server is not relevant to the end user and is not specified for this reason. Consider using dual-core or better CPUs and more RAM if there are a high number of users (15+). We recommend the use of a dedicated server where possible.

## Remote Support

A remote connection via VPN, or other secure third party client, will be required in order to provide the best level of end user support and this is covered in our "Remote Support" document. Please contact Impact Group if you require more details.
